Summary

Computer Science undergraduate specializing in iOS development and full-stack engineering, with hands-on experience building production-grade Swift applications and AI-powered web tools. Winner of the Apple WWDC 26 Swift Student Challenge. Passionate about crafting accessible, user-centric software at the intersection of spatial computing, on-device AI, and clean architecture.

Education

Galgotias University, Greater Noida	2023 – 2027
<i>Bachelor of Technology in Computer Science Engineering</i>	CGPA: 7.2/10
South Delhi Public School	2023
<i>Class XII</i>	CBSE: 69%
South Delhi Public School	2021
<i>Class X</i>	CBSE: 70%

Experience

iOS Developer Intern	May 2025 – Jun 2025
<i>Infosys</i>	<i>Mysuru</i>
- Collaborated in an Agile team to design and develop a Loan Management System (LMS) iOS app, participating in sprint planning, stand-ups, and retrospectives. - Engineered an AI-powered borrower risk analysis feature that classifies applicants into Low, Medium, or High risk, enabling faster and more objective lending decisions. - Managed tasks and sprint deliverables using Jira and Git while attending Infosys L&D sessions on communication, workplace discipline, and professional conduct.	

Technical Skills

Languages: Swift, C++, Python, JavaScript, TypeScript
Web Technologies: React, Vite, Tailwind CSS, HTML5, CSS3, Bootstrap, SwiftUI
Backend & Databases: SQL, Appwrite, Vercel Serverless Functions
Tools & Frameworks: Git, GitHub, Xcode, VS Code, Vercel, Google Gemini API, GitHub API, Jira
Concepts: Agile/Scrum, OOPs, MVVM Architecture, Problem-Solving, Leadership

Projects

QuickMathsAR Swift, SwiftUI, ARKit, RealityKit, Foundation Models, CoreHaptics	GitHub
<i>Apple WWDC 26 Swift Student Challenge Winner</i>	
- Developed an AR-based iOS/iPadOS app using ARKit and RealityKit to visualize interactive 3D graphs of linear and quadratic equations with real-time interactions. - Built an on-device AI math tutor using Apple Foundation Models to provide conceptual explanations and analogies instead of direct answers. - Designed a custom graph engine and app architecture with accessibility features, haptic feedback, and adaptive layouts for iPhone and iPad.	
RepoLens AI React, TypeScript, Vite, Tailwind CSS, shadcn-ui, Gemini API, GitHub API, Vercel	Live Demo
- Built an AI-powered GitHub repository analyzer that generates structured insights into architecture, data flow, and tech stack using Gemini and GitHub APIs. - Developed secure Vercel Serverless Functions and structured JSON workflows for reliable AI responses and deterministic UI rendering. - Implemented an interactive file explorer that provides AI-generated explanations of a file's purpose, logic, and dependencies directly in the browser.	

Certifications

• Oracle: Database Design with SQL	Nov 5, 2024
• freeCodeCamp: Responsive Web Design	Oct 21, 2023
• Smart India Hackathon (SIH): Participation Certificate	Sep 17, 2025
• Infosys: iOS Development Bootcamp	Aug 4–8, 2025
